Application for the Junior Managers Program (Trainee) — Supply Chain Management

[Reference number from the advert, if given]

Dear [Ms / Mr Surname, or "Recruiting Team" if no contact is named],

I hold an MBA in Supply Chain Management, I have run operations and built the reporting that operations depend on, and since May 2025 I have been completing full-time software engineering training at 42 Heilbronn. I am applying to the Junior Managers Program because that combination — supply chain grounding, working data capability, and the ability to build systems rather than only specify them — is precisely what rethinking a global supply chain asks for.

My MBA centred on operations strategy, project management and data-driven decision-making, and I applied it directly afterwards. As Operations Manager from 2019 to 2020 I improved process stability across operational teams and built data-driven tracking systems to monitor day-to-day performance. Over the four years that followed, as a freelance IT and data consultant, I built SQL data models and Tableau dashboards that turned clients' operational and commercial data into decisions they could act on. [One concrete result — a number, or a decision your reporting changed. See README.]

Joining 42 Heilbronn in May 2025 was a deliberate step, not a change of direction. Supply chains are increasingly decided by the quality of the systems and data underneath them, and I did not want to be the manager who can only commission that work and hope it is right. Modular C programming, manual memory management, structured debugging and daily peer review have given me a working engineer's understanding of how such systems are actually built, where they break, and what it costs to change them — alongside the habit of having my work reviewed and defending it.

[The role you held abroad, the country, and how long you were there — state the duration.] I work in English at [level] and German at [level], and I am used to working across teams that do not share a first language or a function — as a Management Trainee I sat between sales and technical teams and translated in both directions.

[Why Bosch specifically — name something concrete. See README.] [Sustainability — only if you have something genuine. See README.]

I would welcome the opportunity to discuss how I could contribute to the programme, and I am available for interview at your convenience.

Yours sincerely,

Ursila Pradeep Vadakkumpuram
